SUBJECT INDEX

Airport ground-support equipment
lead/acid batteries for, 231
Alloy technology
Si–Ge, recent advances in, and assessment of problems of building modules for radioisotope thermoelectric generator, 247
Antimony
in lead–acid cells; review and design considerations, 75
poisoning in lead–acid batteries, 301

Ball-mill processes
for making leady oxide, comparison of Barton-pot and, 157
Barton-pot processes
for making leady oxides, comparison of ball-mill processes and, 157
Bromine
preparation and performance of plastic-bonded-carbon Br electrodes, 337

Cadmium
electrode kinetics of Ni/Cd cell and failure-mode prediction; estimation of equivalent resistance of internal short, 67
Cadmium electrodes
oxygen recombination rate on plastic-bonded, doped with Ni(II) hydroxide, 55
Calcium
casting technology for Pb–Ca grids, 143
Carbon
plastic-bonded-carbon Br electrodes, preparation and performance of, 337
Carbon-based electrodes
carrying Pt-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, 279
Carbon monofluoride
performance characteristics of Li/MnO_2–CF_x hybrid cathode jelly-roll cells, 325
Casting technology
for Pb–Ca grids, 143
Catalyst(s)
Pt-group bimetal, carbon-based electrodes carrying, for oxygen reduction in fuel cells with acidic or alkaline electrolytes, 279
Cathode(s)
Li/MnO_2–CF_x hybrid, jellyroll cells, performance characteristics of, 325
polyacrylonitrile-based, in Li–I solid state batteries, performance of, 37
Chemisorbed water
effect of, on electrical capacity of lead–acid battery positive plate, 15
Commercial cells
Faradaic impedance of Li–SO_2 system; further examination of, 7
Copper-stretch-metal technology and applications, 147

d.c. linear polarisation
studies on Fe^{2+}/Fe^{3+} redox system using, and impedance techniques, 269
Dry charging
lead/acid batteries, quality-control techniques for, 189

Electrical capacity
of lead–acid battery positive plate, effect of chemisorbed water on, 15
Electrochemistry
of L-niobium pentoxide in Li/non-aqueous cell, 287
Electrodes
carbon-based, carrying Pt-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, 279
iron oxide, study of, in alkaline electrolyte, 315
kinetics of semiconducting polymer, in lithium cells, 27
plastic-bonded-carbon Br, preparation and performance of, 337
plastic-bonded Cd, doped with Ni(II) hydroxide, oxygen recombination rate on, 55

© Elsevier Sequoia/Printed in The Netherlands

Electrode kinetics
of Ni/Cd cell and failure-mode prediction; estimation of equivalent resistance of internal short, 67
Electrode materials
for V redox cell, evaluation of, 45
Equivalent resistance
of internal short, estimation of; electrode kinetics of Ni/Cd cell and failure-mode prediction, 67

Failure-mode prediction
electrode kinetics of Ni/Cd cell and; estimation of equivalent resistance of internal short, 67
Faradaic impedance
of Li–SO_2 system; further examination of commercial cells, 7
Fuel cells
carbon-based electrodes carrying Pt-group bimetal catalysts for oxygen reduction in, with acidic or alkaline electrolytes, 279

Germanium
Si–Ge alloy technology, recent advances in, and assessment of problems of building modules for radioisotope thermoelectric generator, 247

Health
of lead workers in New Zealand, overview of management, 151

Impedance techniques
studies on Fe^{2+}/Fe^{3+} redox system using d.c. linear polarisation and impedance techniques, 269
Iodine
performance of polyacrylonitrile-based cathodes in Li–I solid state batteries, 37
Iron
studies on Fe^{2+}/Fe^{3+} redox system using d.c. linear polarisation and impedance techniques, 269
Iron oxide
electrodes in alkaline electrolyte, study of, 315

Jellyroll cells
performance characteristics of Li/MnO_2–CF_x hybrid cathode, 325

Kinetics
of semiconducting polymer electrodes in lithium cells, 27

Lead
significance of secondary, 121
supply and demand, 113
Lead/acid appliance battery
popular power source remote from the grid, 223
Lead/acid batteries
for airport ground-support equipment, 231
application of photoacoustic spectrophotometry (PAS) to study of positive plates in, 1
curing pasted plates for, 169
developments in paste mixing for, 163
dry charging, quality-control techniques for, 189
for load-levelling applications, 227
research highlights in, 235
Sb poisoning in, 301
separator technology for, 181
separators for sealed (recombination), current technology of, 175
small-sized sealed, 215
for solar (photovoltaic) systems, 211
stationary maintenance-free developments in, 201
Lead/acid battery alloy
use and metallurgy, trends in, 133
Lead/acid battery industry
in India, 85
in Indonesia, 93
in Japan, 97
in Korea, 99
in the Philippines, 105
in Taiwan, 109
Lead–acid battery positive plate
effect of chemisorbed water on electrical capacity of, 15
Lead–acid cell(s)
oxygen recombination in sealed, review of, 261
Sb in, review and design considerations, 75
Lead–calcium grids
casting technology for, 143
Lead workers
health of, in New Zealand, overview of management, 151
Leady oxide
comparison of Barton-pot and ball-mill processes for making, 157
Lithium
electrochemistry of L-niobium pentoxide in Li/non-aqueous cell, 287
Faradaic impedance of Li–SO_2 system;

further examination of commercial cells, 7
kinetics of semiconducting polymer electrodes in Li cells, 27
performance characteristics of Li/MnO_2–CF_x hybrid cathode jellyroll cells, 325
performance of polyacrylonitrile-based cathodes in Li–I solid state batteries, 37
Load-levelling applications
lead/acid batteries for, 227

Manganese
performance characteristics of Li/MnO_2–CF_x hybrid cathode jellyroll cells, 325
Metallurgy
trends in lead/acid battery alloy use and, 133

Nickel
electrode kinetics of Ni/Cd cell and failure-mode prediction; estimation of equivalent resistance of internal short, 67
oxygen recombination rate on plastic-bonded Cd electrodes doped with Ni(II) hydroxide, 55
Niobium
electrochemistry of L-niobium pentoxide in Li/non-aqueous cell, 287

Oxygen recombination
in sealed lead–acid cell, review of, 261
Oxygen recombination rate
on plastic-bonded Cd electrodes doped with Ni(II) hydroxide, 55
Oxygen reduction
carbon-based electrodes carrying Pt-group bimetal catalysts for, in fuel cells with acidic or alkaline electrolytes, 279

Paste mixing
for lead/acid batteries, developments in, 163
Pasted plates
for lead/acid batteries, curing, 169
Photoacoustic spectrophotometry (PAS)
application of, to study of positive plates in lead–acid batteries, 1
Platinum
carbon-based electrodes carrying Pt-group bimetal catalysts for oxygen reduction in fuel cells with acidic or alkaline electrolytes, 279
Polyacrylonitrile-based cathodes
in Li–I solid state batteries, performance of, 37
Polymer electrodes
kinetics of semiconducting, in lithium cells, 27
Positive plates
in lead–acid batteries
application of photoacoustic spectrophotometry (PAS) to study of, 4
effect of chemisorbed water on electrical capacity of, 15

Quality-control techniques
for dry charging lead/acid batteries, 189

Radioisotope thermoelectric generator
building the modules for, recent advances in Si–Ge technology and assessment of problems of, 247

Separator(s)
for sealed (recombination) lead/acid batteries, current technology of, 175
Separator technology
for lead/acid batteries, 181
Silicon
Si–Ge alloy technology, recent advances in, and assessment of problems of building modules for radioisotope thermoelectric generator, 247
Solar (photovoltaic) systems
lead/acid batteries for, 211
Solid state batteries
Li–I, performance of polyacrylonitrile-based cathodes in, 37
Sulphur dioxide
Faradaic impedance of Li–SO_2 system; further examination of commercial cells, 7

Vanadium redox cell
evaluation of electrode materials for, 45
